OTC-19 | SAFETY & WORKFORCE DEVELOPMENT

Behaviour-Based Safety & Safety Leadership

SUGGESTED DURATION: 1 DAY | IN-COMPANY / LIVE ONLINE

Improve safety conversations and the conditions that shape behaviour. The programme connects observation and feedback with hazard control, leadership response and learning.

WHO SHOULD ATTEND

Supervisors, engineers, HSE teams, team leaders and workforce representatives in industrial operations.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Conduct a respectful observation focused on the task and its conditions.
- Give useful feedback and recognise barriers to safe work.
- Translate recurring observations into accountable system improvements.

SUGGESTED PROGRAMME OUTLINE

Morning | Understand work and behaviour

Hazards and critical controls; task demands, equipment, procedures and production pressures; observation ethics; safe and at-risk actions; positive reinforcement and avoiding blame.

Afternoon | Observe, discuss and act

Structured observation and consent; feedback conversations; escalation of unsafe conditions; supervisor response and action closure; trend review and personal safety leadership commitments.

OTC-19 | PRACTICAL APPLICATION & DELIVERY

Behaviour-Based Safety & Safety Leadership

PRACTICAL WORKSHOPS

Safety conversation role-play

Discuss an illustrative shortcut under time pressure; practise listening, checking controls and agreeing practical action.

Observation-to-action review

Sort fictional observations into coaching, equipment, procedure and management issues and assign closure responsibility.

PARTICIPANT TOOLS AND TAKEAWAYS

Safety observation guide; feedback conversation prompts; barrier/action log; individual leadership action plan.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

Client safety observation process and typical work activities. Observation complements the hierarchy of controls and does not substitute for engineering safeguards.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
