OTC-10 | PIPELINES & ASSET INTEGRITY

Cross-Country Pipeline Integrity & Maintenance

SUGGESTED DURATION: 3 DAYS | IN-COMPANY / LIVE ONLINE

Connect pipeline threats with inspection evidence, operating controls and maintenance priorities. Field experience and incident lessons support practical decisions on prevention and response.

WHO SHOULD ATTEND

Pipeline operations and maintenance engineers, integrity teams, inspection coordinators, HSE personnel and asset managers.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Identify major internal, external, mechanical and third-party damage threats.
- Explain the purpose and limits of common integrity information sources.
- Prepare a threat-based inspection and maintenance action register.

SUGGESTED PROGRAMME OUTLINE

Day 1 | System and threats

Pipeline components and operating context; corrosion mechanisms; coatings and cathodic protection principles; third-party damage, geohazards and fatigue; threat identification and critical locations.

Day 2 | Evidence and integrity management

Patrolling, operating trends and leak detection principles; in-line inspection and direct assessment awareness; NDE selection and limitations; data correlation; anomaly review and competent escalation.

Day 3 | Maintenance and incident learning

Pigging, valves and stations; repair planning and isolation interfaces; emergency response coordination; change control, records and integrity performance; practical risk/action prioritisation.

OTC-10 | PRACTICAL APPLICATION & DELIVERY

Cross-Country Pipeline Integrity & Maintenance

PRACTICAL WORKSHOPS

Threat mapping

Use an illustrative pipeline route and operating history to prioritise locations for investigation and identify missing evidence.

Leak-response tabletop

Review pressure and field reports, define escalation and coordination responsibilities and identify lessons for prevention.

PARTICIPANT TOOLS AND TAKEAWAYS

Pipeline threat register; inspection data checklist; maintenance review sheet; incident-learning action plan.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

Pipeline service, route profile, maintenance history and anonymised inspection summaries. Detailed fitness-for-service calculations and statutory approvals require separate competent review.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
