OTC-11 | PIPELINES & ASSET INTEGRITY

Mechanical Asset Integrity & Inspection Planning

SUGGESTED DURATION: 3 DAYS | IN-COMPANY / LIVE ONLINE

A practical bridge between inspection findings and operating decisions for piping, vessels and tanks. Participants learn to recognise deterioration, request the right evidence and track corrective actions.

WHO SHOULD ATTEND

Maintenance and inspection engineers, asset owners, reliability teams and operations personnel responsible for static equipment.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Identify common damage mechanisms and their relationship with service conditions.
- Match inspection questions with suitable NDE methods and their limitations.
- Translate findings into a documented engineering review and action process.

SUGGESTED PROGRAMME OUTLINE

Day 1 | Integrity foundations

Asset boundaries, criticality and credible damage mechanisms; corrosion, erosion, fatigue and thermal effects; design and operating envelopes; inspection history and integrity data quality.

Day 2 | Inspection and assessment awareness

Visual inspection, thickness measurement and selected surface/volumetric NDE; coverage, access and limitations; corrosion monitoring and remaining-life concepts; RBI and fitness-for-service awareness.

Day 3 | From findings to action

Review recommendations and uncertainty; repair/replacement planning; temporary arrangements and management of change; inspection action closure; turnaround interfaces and integrity performance review.

OTC-11 | PRACTICAL APPLICATION & DELIVERY

Mechanical Asset Integrity & Inspection Planning

PRACTICAL WORKSHOPS

Select the inspection method

Match illustrative defects and locations to inspection questions, then discuss which methods can and cannot answer them.

Inspection backlog review

Prioritise sample findings, identify those needing competent engineering review and define closure evidence.

PARTICIPANT TOOLS AND TAKEAWAYS

Damage-mechanism screening sheet; inspection question checklist; recommendation tracker; integrity review agenda.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

Equipment register, service conditions and selected inspection reports. The programme does not confer API inspector certification or authorise inspection/sign-off.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
