OTC-16 | QUALITY & OPERATIONAL EXCELLENCE

Quality Control & Process Improvement

SUGGESTED DURATION: 3 DAYS | IN-COMPANY / LIVE ONLINE

Turn quality problems into measurable improvement projects. Practical plant examples connect customer requirements, data quality, variation, root causes and sustainable control.

WHO SHOULD ATTEND

Production, QA/QC, maintenance, technical services and process improvement teams; engineers and supervisors.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Define a measurable quality problem and select suitable basic quality tools.
- Distinguish variation patterns and investigate causes with evidence.
- Prepare a practical improvement and control plan.

SUGGESTED PROGRAMME OUTLINE

Day 1 | Define quality and collect useful data

Customer requirements and CTQs; process mapping and SIPOC; check sheets, Pareto charts, histograms and stratification; sampling and measurement-system awareness; problem selection.

Day 2 | Understand variation and causes

Scatter and cause-and-effect tools; control-chart concepts; capability and stability distinction; RCA and 5-Why; introductory DMAIC logic; FMEA and risk prioritisation.

Day 3 | Improve and sustain

Corrective action and mistake-proofing; visual controls and standard work; verify results against baseline; control plans and ownership; improvement project presentation.

OTC-16 | PRACTICAL APPLICATION & DELIVERY

Quality Control & Process Improvement

PRACTICAL WORKSHOPS

Two populations in one histogram

Investigate an illustrative two-peaked product-quality distribution by stratifying shifts, machines and material batches.

CAPA improvement workshop

Use a fictional recurring defect to connect data, cause validation, corrective action and an effectiveness measure.

PARTICIPANT TOOLS AND TAKEAWAYS

Quality tool worksheets; improvement project charter; CAPA tracker; process control-plan template.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

Representative process-quality data and participant roles. Statistical examples can use Excel; licensed analysis software is optional and client-provided.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
