OTC-18 | QUALITY & OPERATIONAL EXCELLENCE

FMEA, CAPA & Mistake-Proofing

SUGGESTED DURATION: 2 DAYS | IN-COMPANY / LIVE ONLINE

Identify potential failures before they occur and build corrective actions that prevent recurrence. Participants link failure-mode review with practical controls and verification.

WHO SHOULD ATTEND

Quality, design, maintenance, production and reliability teams; supervisors and improvement facilitators.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Define functions, failure modes, effects, causes and existing controls.
- Prioritise actions using agreed risk criteria rather than a score alone.
- Develop CAPA and mistake-proofing ideas with ownership and validation.

SUGGESTED PROGRAMME OUTLINE

Day 1 | Practical FMEA

System/process boundaries; function and requirement; effects, modes and causes; prevention versus detection controls; severity and action priority; scoring limitations and review discipline.

Day 2 | CAPA and mistake-proofing

Containment versus correction and corrective action; cause verification; prevention, interlocks and detection concepts; feasible Poka-Yoke; implementation risk, change control and effectiveness tracking.

OTC-18 | PRACTICAL APPLICATION & DELIVERY

FMEA, CAPA & Mistake-Proofing

PRACTICAL WORKSHOPS

Pump seal support FMEA

Review an illustrative loss-of-flush scenario, separate causes from effects and recommend controls with verifiable actions.

Error-proof a task

Redesign a fictional assembly or inspection task to prevent an error; describe a trial and acceptance criteria.

PARTICIPANT TOOLS AND TAKEAWAYS

FMEA worksheet; action-priority checklist; CAPA template; mistake-proofing concept and validation sheet.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

A selected process or equipment boundary and client risk criteria. Industry-specific customer FMEA formats can be incorporated when supplied and agreed.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
