OTC-20 | SAFETY & WORKFORCE DEVELOPMENT

Permit to Work, Isolation & Job Safety Analysis

SUGGESTED DURATION: 1 DAY | IN-COMPANY / LIVE ONLINE

Strengthen the planning and communication behind hazardous maintenance work. Participants review task hazards, isolation interfaces and the checks required before work and reinstatement.

WHO SHOULD ATTEND

Operations and maintenance supervisors, permit issuers/receivers, engineers, contractor coordinators and HSE teams.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Connect the permit with job scope, hazards, controls and simultaneous operations.
- Explain energy isolation and verification responsibilities under site procedures.
- Prepare a clear JSA and identify conditions requiring work to stop and be reassessed.

SUGGESTED PROGRAMME OUTLINE

Morning | Plan and authorise work

PTW roles and limits; task definition and JSA; hot work, confined spaces and work at height interfaces; simultaneous operations; gas testing and specialist authorisations under site rules.

Afternoon | Isolation, execution and handback

Energy sources and isolation planning; lockout/tagout principles and verification by authorised personnel; shift handover and changes; suspension, reinstatement and permit closure; control assurance.

OTC-20 | PRACTICAL APPLICATION & DELIVERY

Permit to Work, Isolation & Job Safety Analysis

PRACTICAL WORKSHOPS

Pump maintenance permit review

Find missing controls in an illustrative job pack covering electrical, pressure, stored-energy and process-isolation interfaces.

Scope change scenario

Respond to an unexpected condition after work starts; decide how to stop, reassess, communicate and reauthorise the task.

PARTICIPANT TOOLS AND TAKEAWAYS

JSA worksheet; permit review checklist; isolation verification prompts; handback checklist.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

Client PTW and isolation procedures. Classroom completion does not authorise participants as permit issuers, gas testers or isolation personnel.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
