OTC-23 | SAFETY & WORKFORCE DEVELOPMENT

Ownership & Accountability in Industrial Teams

SUGGESTED DURATION: 2 DAYS | IN-COMPANY / LIVE ONLINE

Translate ownership into observable work habits: clear commitments, early escalation, reliable handovers and completed actions. Plant scenarios make the learning relevant to safety, production and maintenance.

WHO SHOULD ATTEND

Supervisors, engineers, shift in-charges, maintenance and operations leaders, and cross-functional plant teams.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Distinguish responsibility, authority and accountability for a defined task.
- Communicate risks and commitments early across department interfaces.
- Build a measurable personal and team action plan with review dates.

SUGGESTED PROGRAMME OUTLINE

Day 1 | Own the outcome

Role clarity and decision authority; commitments and boundaries; facts versus assumptions; handover quality; escalation under production pressure; speaking up and learning from mistakes.

Day 2 | Make accountability work

Cross-functional coordination; action tracking and closure evidence; constructive feedback; supervisor follow-up; leading indicators and review routines; individual commitments and implementation planning.

OTC-23 | PRACTICAL APPLICATION & DELIVERY

Ownership & Accountability in Industrial Teams

PRACTICAL WORKSHOPS

The overdue defect

Role-play a recurring equipment defect shared by operations and maintenance; agree an owner, action, deadline and escalation path.

Shift handover challenge

Compare weak and strong handovers for a plant abnormality and build a concise handover standard.

PARTICIPANT TOOLS AND TAKEAWAYS

Commitment and escalation matrix; handover checklist; action closure tracker; 30-day individual implementation plan.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

Client role structure and typical coordination problems. Cases can be customised for power generation, petrochemicals and process industries.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
