OTC-07 | RELIABILITY & MAINTENANCE

Reliability-Centred Maintenance & PM Optimisation

SUGGESTED DURATION: 3 DAYS | IN-COMPANY / LIVE ONLINE

Select maintenance tasks according to equipment function, failure consequences and the ability of a task to manage risk. Participants examine existing PM work for technical value and practical feasibility.

WHO SHOULD ATTEND

Reliability engineers, maintenance planners, asset owners, operations engineers and maintenance leaders.

WHAT PARTICIPANTS WILL BE ABLE TO DO

- Define functions, functional failures, failure modes and consequences.
- Choose condition-based, scheduled and failure-finding tasks where technically justified.
- Identify PM improvements and a process for authorisation and review.

SUGGESTED PROGRAMME OUTLINE

Day 1 | Functions and failure consequences

Operating context and system boundaries; required performance; functional failures and failure modes; safety, environmental, operational and hidden consequences; criticality and data quality.

Day 2 | Task selection

Condition monitoring and P-F interval concepts; restoration and replacement; failure-finding; task applicability and effectiveness; run-to-failure and redesign decisions; introduction to RCM evaluation principles.

Day 3 | Convert analysis into a workable programme

Review existing PMs; task wording, frequency and acceptance criteria; resource and spares requirements; CMMS integration; pilot implementation, approvals and performance review.

OTC-07 | PRACTICAL APPLICATION & DELIVERY

Reliability-Centred Maintenance & PM Optimisation

PRACTICAL WORKSHOPS

Boiler feed pump function review

Build a small failure-mode table and select justified maintenance tasks for a defined operating context.

PM challenge workshop

Review sample PM tasks; retain, revise or investigate each task and record the technical basis before any authorised change.

PARTICIPANT TOOLS AND TAKEAWAYS

Function/failure worksheet; task selection record; PM review matrix; implementation and effectiveness checklist.

HOW LEARNING IS DELIVERED AND ASSESSED

Facilitated explanations, worked examples, case discussions and small-group exercises. A short baseline check establishes starting knowledge; a closing knowledge check and practical review assess learning. Assessment can be adapted for operators, technicians or experienced engineers.

CUSTOMISATION AND CLIENT INPUTS

Asset hierarchy, selected PM task lists, failure records and criticality criteria. This is an applied introduction, not a branded RCM practitioner certification.

The agenda is indicative. Final content, duration, batch size, language and delivery arrangements are agreed after a training-needs discussion. Online delivery uses document reviews, calculations, role-play and case exercises; physical demonstrations require separate site arrangements.

FACILITATOR

Prem Prakash Mishra | Mechanical engineer, advisor and corporate trainer. Brings 39 years of career experience across Kuwait Oil Company, IPCL and NTPC, spanning projects, commissioning, maintenance, reliability, asset integrity and industrial audits. Specialist inputs, where needed, are agreed in the proposal.

COMPLETION AND FOLLOW-UP

An Omtech Corporation participation or completion certificate may be provided under the agreed assessment arrangements. This is company training, not an accredited professional qualification or a guarantee of certification. Post-training support is available with scope and duration agreed in the proposal.
